CRACKING PROCESS ONLY SOLUTION OF GASOLINE SCARCIT

Director, of United States Bureau of Mines Says Commodity to Go Even Higher Yet.

Washington, April 19.-The only hope for the speedy reduction in the high prices for gasoline, according to Van H. Manning, the director of the United States bureau of mines, department of the interior, lies in the immediate development of the so-called Rittman cracking process and similar processes. He declares that the prevailing prices may not only continue for some time but will undoubted'y reach higher levels before doubtedly reach higher levels before there is any permanent relief. He points to the fact that the oil com-panies, in competition to supply the United States government for the next fiscal year, have offered gasoline next fiscal year, have offered gasoline at thirty-one and a half cents a gallon for the whole year, and argues from this that, if the United States, using vast quantities of gasoline, is compelled to pay this much the private consumer will have to pay much more. Furthermore, Mr. Manning says that with a rate of production the same as in 1915 the crude oil supply of the United States, from which we are getting our present supply of we are getting our present supply of gasoline, will be exhausted in twentyseven years.

"The stantion is iven worse," said Mr. Manning, "for the production is not going to remain stationary. The demand for gasolino has increased more than 200 per cent in the last live years and is now increasing at an even faster rate. On January of this year there were 2,225,000 automobiles in use, and automobile manufacturers est'mate that this will be increased to 3,000,000 by January 1, 1917. As the average automobile will use more than ten barrels of gasoline a year, this means an increased consumption of more than sig millie. barrels of

"And what is still more importan to the situation present indications forecast a decreased production of gasoline from crude oil for 1r16 rather than an increased production. The daily production of crude oil for Feb-ruary in the Mid-Continent field, which produces 75 per cent of our re-finable crude oil was 40,000 barrels less than the average daily production for 1915, and 20,000 barrels less per day than the average daily production in 1914, and this is in the face of the strong incentive to find new fields given by the rising market of the past six months, which has culminated in record high prices for that field of \$1.55 per barrel for the crude, with, in some cases a premium exceeding forty cents a barrel.

Unprecedented Demand.

Unprecedented Demand.

"The demand for gasoline has outstripped the demand for all other petroleum products with the result that these other products, amounting to about 7 5per cent of the production, are being sold for less than the cost of production. In other words, 25 per cent of the production consisting chiefly of gasoline, must pay all cost in addition toth o amount that is lost in marketing the remaining 75 per cent.

We are exporting at the presen time 20 per cent of our entire pro-duction of crude petroleum, including 16 per cent of our gasoline production.
We are burning 25 per cent of our
petroleum under bollers, which is a
shameful and criminal waste of presnameful and criminal waste of pre-clous natural resources and we are using another 20 per cent of our crude petroleum inefficiently in com-petition with coal as in the manufac-ture of artificial gas. Three-fourths of the entire amount of artificial gas, in this country is made from petro-leum. This gas could be made from coal, except that the gas manufactur-

for this purpose.
"The solution of the problem is conbeing put to their proper uses. Let us stop this wasteful foolishness of burning petroleum under boilers and the use of crude oil in the making of artificial gas. If by means of crackarthem gas. It by means of cracking processes, such as the Rittman process, our kerosens and fuel oils, which we have been using in competition with coal and selling for less than the cost of production, can be converted into gasoline, the present production of crude petroleum would be more than ample to supply our present demands for gasoline. Not only that, but the general adoption of these processes would result in extending the life of our petroleum deposits, based on the present demands, from twenty-seven years to more than one hundred years, at the same time reducing and stabilizing the cost of gasoline to the consumer and preventing rap'd fluctuations in price. Ten different refineries are now installing the Fittman process and more companies are considering doing so. This is but a drop in the buckett, but the situation is topeful.

"The importance of petroleum cannot be measured by gollars and cents." ing processes, such as the Rittmar

The importance of petroleum cannot be measured by dollars and cents.

HUNDREDS BUSILY REHEARSING FOR THE BIG PAGEANT

Twelve Schools and Colleges of Columbia Working for Shakesperian Festival.

Columbia, April 19.—In twelve schools and colleges of Columbia this week almost two thousand persons are hard at work at daily rehearsals of the manifold parts of the huge Shakesperian pageant which is to appear on the campus of the University of South Carolina and at the Columbia theatre, Tuesday, April 25. Last week has been one of much progress and as the vast spectacle has ap-proached completion interest in its appearance has grown greatly in the

city and in the state at large.

An expert costumer from Philadelphia, who has costumed several notable historic pageants including that of the famous Hudson-Pulton celebration some years ago, has received the contract for the costumes. Six hun dred costumes have been ordered for the principle characters. Elizabeth an stage furnishings for the night performance are being prepared, and the University campus has been carefully surveyed and the entrances and exits laid out. Perry Teeple and E. R. Jeter, two university instructors have composed excellent lines and music for certain parts of the afternoon and night performances. Miss Jessie Green of Columbia has been recently elected May Queen by the students and will appear with her

It's an interesting Fact
That the two most successful Chautauquas of the entire 120 towns and cities visited by the Redpath Chautauquas last season were

Jacksonville, Fla., and Chicago

That the large cities are now AWAKE TO THE VALUE OF A REDPATH CHAUTAUQUA. in turn, but emphasizes the Chautauqua's importance to the smaller city.

All institutions must eventually stand or fall on their merit. For the Chautauqua to find a permanent place in cities like Jacksonville and Chicago at once speaks for itself. Season tickets for the forthcoming Chautauqua in this city are now on sale with the local auspices at \$2.50 each. After the opening day the price advances to \$3.00.

Chautauqua Week Here April 29 to May 5

JUMPIRON BED

Open sluices of system each morning and wash away the poisonous, stagnant matter, says authority.

A glass of hot water with a teaspoonful of limestone phosphate in it, drank each morning before breakfast, keeps us looking and feeling fit.

Life is not merely to live, but to live well, cat well, digest well, work well, sleep well, look well. What a glorious condition to attain, and yet how very easy it is if one will only adopt the morning inside bath.

Folks who are accustomed to feel dull and heavy when they arise, splitting headache, stuffy from a cold, foul tongue, nasty breath, acid stomach, can, instead, feel as fresh as a daisy by open-ing the sluices of the system each morning and flushing out the whole of the internal poisonous

stagnant matter.

Everyone, whether ailing, sick or well, should, each morning, before breakfast, drink a glass of real hot water with a teaspoonful of limestone phosphate in it to wash from the stomach, liver, kidneys and bowels the previous day's indigestible waste, sour bile and poisonous toxins; thus cleansing, sweetening and puri-

fying the entire alimentary canal before putting more food into the stomach. The action of hot water and limestone phosphate on an empty stomach is wonderfully invigorating. It cleans out all the sour fermentations, gases, waste and acidity and gives one a splendid appetite for breakfast. While you are enjoying your breakfast the water and phos-phate is quietly extracting a large volume of water from the blood and getting ready for a thorough flushing of all the inside organs.

flushing of all the inside organs.

The millions of peope who are bothered with constipation, bilious spells, stomach trouble, rheumatism; others who have sallow skins, blood disorders and sickly complexions are urged to get a quarter pound of limestone phosphate from the drug store, which will cost but little, but is sufficient to make anyone a pronounced crank on the subject of internal sanitation.
